Subject: Groundwater Potentiometric Map Downgradient from Central Wire

John:

Three things:

Attached is the groundwater potentiometric map without specifics at DGW-1 because the surveying information from its installation is not available.

In light of your most recent comment letter, Central Wire and Autumnwood Consultants would like to discuss this with you in a conference call to come to some final understanding of what you need. Please let me know two or three good times for you to do discuss your comment letter.

Central Wire has now been "banned" on using the Techalloy moniker. How do we change all of the EPA documents and records to reflect the entity as Central Wire?

A fourth item of information. [Ex. 6 Personal Privacy (PP)] has decided to abandon its sod farming activities. Their office trailer is no longer there and The Manager has been moved down to Kankakee. That means the irrigation well on [Ex. 6 Personal Privacy (PP)] will no longer be used, at least not in the foreseeable future. The [Ex. 6 Personal Privacy (PP)] well will still be used for their golf course turf grass operation, but that well is about 3,250 ft (per Google Earth) from the leading edge of the plume so I do not believe there is any way that this irrigation well that occasionally pumps about 250 gallons a minute will influence a plume that far away.

Please let me know your availability and we will schedule a call.

Regards,

Jack
